Safety Link Wheel Nut Management

Blends with look of wheel

Visual flag alerts nut movement

REDUCE MAINTENANCE COSTS DRAMATICALLY!!!

Wheel detachments occur at a rate of 40 to 60 per week. Forty-five (45%) to Fifty (50%) of wheel separations are caused by loose wheel nuts.

Safety Link will save your company money by:

- Only torque lug nuts when Safety Link system indicates loosening
- Reducing down time for vehicle and driver
- Reducing costly road call charges
- Eliminating costs for replacement of wheel/hub/mounting hardware and tires from wheel

Reducing property damage, personal injury or loss of life costing millions in awards and legal expenses.

HOW IT WORKS:

Safety Link is the most economical system in the market place today that effectively prevents Wheel Nut loss. With the Safety Link System, a lug nut can only move 6 degrees. Safety Link then locks the lug nut and prevents further movement thereby securing the wheel. The Safety Link System is installed by placing a clip on each lug nut creating an interlocking circle. Should a lug nut move, the red tab on the clip will become visible indicating the need to torque the lug nuts.
